Province of Nova Scotia Directory.

THIS work will contain the names of every person (male) from 20 years old and upward. It will not be published again for ten years, and will therefore be an excellent and cheap medium to Advertisers. The Publishers are quite encouraged in their canvass for the New Brunswick Directory, and hope the Nova Scotia business men of all classes will see the necessity of being equal, if not superior, to their neighbors in support of their own Provincial Directory. There is great need of a General Directory as there has not been one issued for 18 years.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters:—

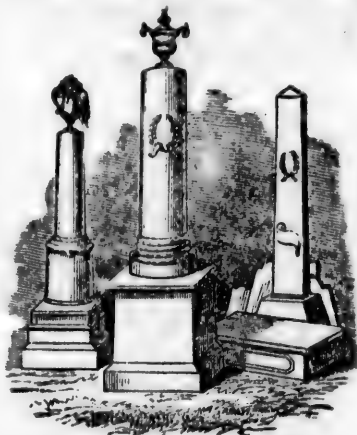

Moon.	Time of Change.	In Summer.	In Winter.
If New Moon, First Quarter, Full Moon, or Last Quarter, happens	Between midnight & 2 A. M. }	Fair.	Hard Frost unless wind be S. or W.
	" 2 and 4 A. M. }	Cold with showers.	Snow and stormy.
	" 4 " 6 " }	Rain.	Stormy and rainy.
	" 6 " 8 " }	Wind and rain.	Stormy.
	" 8 " 10 " }	Variable.	Rain if wind W.
	" 10 " 12 " }	Showery.	Snow if E.
	At 12 Noon, and to 2 P. M. }	Very rainy.	Cold and high wind.
	Between 2 and 4 P. M. }	Variable.	Snow or rain.
	" 4 " 6 " }	Fair.	Fair and mild.
	" 6 " 8 " }	Fair if wind be N. W. }	Fair.
	" 8 " 10 " }	Rainy if S. or S. W. }	Frosty if wind N or N
	" 10 " midnight.	Ditto. Ditto.	E. Snow if S or S W
		Fair.	Ditto. Ditto.
			Fair and frosty.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week; the nearer noon any of those changes happen, the more foul and wet will be the weather that will follow.

The Astronomical day is reckoned from Noon to Noon through the 24 hours. Thus July 21, 9h. is 9h. A. of July 21st, and July 21st, 15h. is 3h. M. of July 22.

The Sun's Declination and Equation of Time are given for Noon at Halifax, Apparent Time, i. e. when the True Sun is on the meridian.

The Moon's Southing is given in Astronomical Time for the Meridian Passage at Halifax; and her declination when on that meridian.

Both the rising and setting of the Moon are given for every day in the year.

THE TIDES.

The Tides in the Calendar given for the Ports mentioned, are the tides that occur during the day. In the Tide Table (page 53) will be found constants for finding the time of High Water at each of the places mentioned in the Table.

The Times of High Water given in the Calendar have been corrected for the varying distance of the Moon from the Earth, and also for her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

It will sometimes be found that when a constant is added to the time of High Water at Halifax, the sum exceeds 12 hours; in this case subtract 12 hours from the sum, and the remainder will be the time of High Water at the required port on the following afternoon or morning, according as the Tide at Halifax was a morning or afternoon Tide.

EXAMPLE.

High Water at Halifax, Jan. 19th 11h. 34m. M.
Boston Light, U. S., add 3h. 22m.

	14h. 56m.
Subtract 12h.	

High Water at Boston, Jan. 13 2h. 56m. A.

It will sometimes be found that a constant to be subtracted is greater than the Time of High Water at Halifax; in this case add 12 hours to the time at Halifax, subtract the constant, and the remainder will be the time of High Water at the required Port for the previous Morning or Afternoon, according as the tide at Halifax was an Afternoon or Morning Tide.

DECEMBER.—The length of the shortest day, Dec. 21, is 8 hours 37 minutes. By the end of the month the day has lengthened 3 minutes. About the 10th, Venus reappears as a morning star. Mars and Jupiter are evening stars.

In this Almanac all the times except for Moon's Southing are Mean Time at Halifax, i. e., Civil Time. The Moon's Southing is given for Astronomical Time at Halifax.

Standard Time is 15 minutes earlier than Halifax Mean Time, and the Railway Time one hour later than Halifax Standard Time.

JANUARY.—These Farmer's Foot Notes are intended as a monthly guide or reminder of field work, indoor operations, and of farm matters in general, that require attention during the progress of the year. They are not written for the purpose of furnishing new, or original, or merely theoretical information, but rather as practical hints to intelligent Agriculturists already familiar with the science and practice of the profession. A fact known to every farmer is that no two seasons are the exact counterparts of each other, and the farmer or gardener or fruit-grower will be most successful whose crops are selected, and operations carried on, in view of the season proving either good, bad or indifferent. Crops that ripen well one season may not do as well on the same farm the next, and

PATRONIZE SMITH'S DRUG STORE.

FEBRUARY is the trying month for cattle. We would repeat the advice given for their care in January; we cannot, in fact, too strongly impress the necessity of care in their feeding, watering, and general treatment, at this season of the year. Barns may be faulty, and the cold severely felt, and yet this is one of the least evils in Nova Scotia, for horned cattle require plenty of fresh air, and the winter and spring rates of mortality in cows in the country barns is very low compared to that of the apparently comfortable, substantial, wind-tight stables of the City of Halifax. The root cellar may be troublesome to get at, and the animals may thus miss an occasional meal; the wells may be frozen, and the way to watering places may be so slippery that the cattle cannot reach them without discomfort or positive accident. In order to overcome these and many other difficulties that appear in February, it is a good rule to give extra time and attention to the stock. In feeding grain and meal always mix them into cut hay, moistened. In districts where an Agricultural Society does not already exist this

is a good time to organize. Farmers have leisure to attend a meeting, and take steps for organization. Notification has to be made to the Office of Agriculture, so that the new Society may be sanctioned by the Governor-in-Council, before the end of June, in order to qualify for the grant for the year.

MARCH.—The Nova Scotia climate is singularly well adapted for the growth of Garden Vegetables and Root Crops,—yet one of the most lamentable wants on our Nova Scotia farms is the kitchen garden. Instead of finding on every farm a well furnished kitchen garden, filled with vegetables and small fruits, sufficient to provide for the family wants during the year, such an inexpensive luxury is the exception rather than the rule. There is no reason why every farmer's family should not be provided to a large extent with supplies from the garden, such as early salads, in spring-time, rhubarb for pies, early green peas, early turnips, lettuce, radishes, cucumbers, early cauliflowers and cabbages, early beans, gooseberries, currants, strawberries, raspberries, (not the watery, wild kinds that grow about

The nature of our climate necessitates the use of hot-beds for raising seedling plants of those crops that require a long season to mature. A hot-bed is made by piling on successive layers of well-chopped horse-dung, obtained from a stable where oats are freely fed. The manure may be raised to a height of two or three feet above the surface of the soil. On top, spread four or five inches of very fine and rich soil mixed with sand; this should have been prepared in the fall, and kept dry under cover all winter,—otherwise it is likely

expedition and vigor as the weather will allow: the farmer should be ready to anticipate the advantages arising from early work. Early in the month, if the fields are not fit for ploughing or sowing, preliminary operations may be performed. Manure under cover may be carted out on the frozen soil. In fields seeded down with timothy last fall, it will now be time to sow clover,—a mixture of red and alsike is the best for hay. Where early potatoes are required, the seed should be kept in a warm place so as to start the eyes, and, whenever the ground is dry enough, they may be planted. This advice if not heeded will lead to potatoes coming up scantily, many rotting in the ground. If farmers, instead of planting inert seed potatoes, taken out of a cold cellar, would first allow the eyes to start, there would be fewer complaints of the seed perishing in the soil. Peas and Broadbeans may be sown at the very beginning of the month; onions, parsnips

either already been committed to the soil, or is too tender to withstand the coldness, or the probable frosts. Such exceptional crops are bush-beans, pole-beans, corn, tomatoes, cucumbers, squash; it is only in warm, sandy soils that such things can safely be put out before the end of the month. Turnips also should not be sown in May, except the small garden patch of early whites for household use. One of the principal marketable crops in Nova Scotia is the potato. It has been found advantageous of late years to plant as early as possible; as soon, therefore, as the ground is in fit condition, commit the potato to it; see however, that the eyes of the seed have started into growth, otherwise it will be apt to rot in the cold seed bed. In light land the manure (old and well rotted) may be

some spruce or other brush over them on cold nights. A method much used in France, and which may easily be adopted in this country, is to burn brush to windward so as to cover the field with a cloud of smoke. Attention has often been called to such simple and costless devices, and yet, year after year, we hear of the loss of early crops; it is said "by frost," we should say "by neglect." The Colorado bug is not likely to appear as early as June; if it should, be very careful to pick off by hand, or dust with Paris green before the dew has gone off the vines. As soon as the currant, and gooseberry bushes have pushed out their first leaves and early blossoms, it will be found advantageous to give them a sprinkling of white hellebore powder in the morning before the dew is off. This will destroy the first crop of currant worms, and thus preserve the bushes and the fruit crop for the season. Summer bedding plants are set out in the flower garden as early

roots and stems, and by these several means, to ensure vigorous growth. We are apt to have a good many rainy days in July, and, as most of the hoeing work has to be compressed between planting time and haying time, haying has occasionally to be begun before potato hoeing is completed; this occurs on many of the best regulated farms. In ordinary seasons it is sure to occur on a farm where foresight is not shown, hence the miserable root crops we so often see. Let our farming readers then be careful to forecast the weather probabilities in light of the July work to be done on the growing crops, and thus avoid the disastrous loss that comes from neglect. The sowing of turnips is usually recommended for the month of June, but, as the ground has to be remarkably fine for this crop, and as

turnips are often put in to fill up land that was originally intended for the earlier sown roots, it frequently happens that turnips have to be sown in July. Some even prefer to sow their Swedes early this month, so as to avoid the "fly," and the soft turnips for immediate feeding need not necessarily be sown till the end of July, although, if they get warm genial weather to start with they do much better earlier. It is a fact, however, that late sowing, while it is apt to give a small yield, ensures excellent quality, and freedom from fibre, so that turnips intended for table use in winter, should never be sown early. The ground should have undergone a thorough pulverization. Light sandy soil is the best for turnips. They start best after the ground is warm, but the bulbs swell most rapidly during the cool dewy nights in Autumn. The soil cannot be worked too deep or made

too fine for turnips. Town manures are valuable for this crop and crushed bones have been applied with best effects, either when covered in the drills in the manner of ordinary dung, or, preferably, when sown by machine along with the seeds, so as to be in immediate contact with the latter.

AUGUST.—Haymaking is the most important operation of the Nova Scotia farmer, half of all the land under crop of every kind being occupied with grass destined to be made into hay. More than half a million acres have to be mown every season. Our haying season usually begins in the extreme western part of the Province, early in July, but later in the Eastern Counties, and especially where the land is heavy; in most districts it is carried over into the month of

garden and orchard. Where the trees are in grass they will benefit by a rich top dressing around their roots. Look after the ripening fruit, destroy caterpillars, if any still remain; pick the early August apples, and send them into a local market, or to the picnic. When the rain comes, beds of strawberries may be made up. See that the ground is well drained and enriched with old manure. Mushrooms now appear in horse pastures, house flies become troublesome, and the swallows congregate in flocks and leave us.

SEPTEMBER.—Haying was finished in August, and probably all the grain has also been harvested. During this month, Indian Corn will have to be cut and put into the Siloes; fortunately these are now on the increase in this Province. The ensilage forms an excellent supplement to the hay and roots upon which our

cattle were fed too exclusively in former years, but ensilage is still used to only a very small extent. Later in the month, Potatoes, of the earlier kinds, and early planted, will be ready to be taken up; but, while the weather remains warm, they should be well dried and aired before being put into the cellar, and only in small quantities at a time. The farmer's year is a complete circle and, before one year's annual harvest is taken in, it is needful to be preparing for the next. In fact, it is already time, by the beginning of September, to sow Winter Rye, which is a favorite crop with some of our farmers. The County Exhibitions are held during this month and the next, and will be looked forward to with interest by every improving agriculturist, whether an intending exhibitor or a mere spectator seeking information as to the latest novelties and improvements in his profession.

OCTOBER.—The apple crop is yearly acquiring increased importance in Nova Scotia, and our Apple Orchards are annually extending. But there is still plenty of room, and no farmer can make a better permanent investment than by planting an orchard. The best market varieties, at least those that appear at present to be most in favor among our fruit growers, are: Gravenstein, Yellow Bellefleur, King of Tompkins, R. I. Greening, Ribston Pippin, Northern Spy, Vandevere, Golden Russet, Nonpareil and Baldwin. Strawberries and Raspberries, on account of their perishable character, are limited to local markets. But Pears, Plums and Cherries may be grown in any quantities for foreign markets. Digby County is at present our cherry County, and Cape Breton has the most profitable plum orchards, but these fruits may be grown with profit all over the Province. Now

that the season's work is well nigh over, the young man on the farm may repair to the School of Agriculture, and Provincial Farm, Truro, where instruction is given in the Art of Agriculture, and the sciences bearing upon it.

NOVEMBER.—The improvement of cattle has at length taken a secure hold upon the people of Nova Scotia, and is carried out to some extent through the agency of Agricultural Societies. Every Society keeps, or ought to keep, a sufficient number of male animals for the use of members. If the selection and purchase of animals required for the season, be deferred till Spring time, large prices have to be paid, and suitable animals are not always obtainable. For beef cattle the Short Horn Durham, Polled Angus, Galloway, and Hereford are used. For milk alone, Ayrshires are to be preferred, Devons make the best working oxen, are quick, active, and easily

fed, and soon fatten in the wild pastures for beef. For domestic cows, the creamy Guernseys or Jerseys are the most suitable. The Jerseys have been great favorites, and their increase will promote the manufacture of butter, but it threatens to lessen our capacity for beef production. Holsteins are also increasing, but less rapidly, in a few localities, as combining beef producing with milking qualities. As soon as the root crops are cleared off the fields, the farmer should employ his whole strength in fall ploughing. Whether on old or new land fall ploughing is a most important operation. Without it a farm cannot be worked to advantage. After ploughing, do not forget to go carefully over the water furrows to make way for the exit of the rain and melting snows that are sure to flood your fields before seed time. A well ploughed, well drained, field may be sown in spring as soon as the frost is gone, while one that is irregularly ploughed, or has

no water furrows, may long remain a puddle, defying every attempt to improve its condition, until the season has so far advanced as to reduce very much the prospect of a crop. The best part of what is too often left to be "Spring work," can be done in the month of November. At the same time care should be taken not to open up gravelly or hilly land subject to be scoured by the Fall and Spring rains, or melting snows.

DECEMBER. — Agricultural improvement is encouraged and promoted in various ways by the Provincial Legislature. Grants are given to aid County Exhibitions, and, once in three years, to enable a Provincial Exhibition to be held. Bonuses are also given on the importation of horses suitable for the raising of useful draught and carriage horses, preference being given to the Cleveland Bay. In addition

Societies may also, by special permission, introduce seeds of new varieties of grain, roots, and also, improved implements, and sell them to members at cost and charges. TEMPERANCE DIRECTORY.

SONS OF TEMPERANCE.—The first Division was organized at Yarmouth, Nov. 17, 1847. The Grand Division was organized April 22, 1848, incorporated in 1851. There are now three hundred and eleven (311) Subordinate Divisions, with seventeen thousand (17,000) members,—50 Bands of Hope with 4000 members; and four Sections of Cadets with 140 members; *Grand Worthy Patriarch*, Robert T. Murray, Halifax; *Grand Scribe*, Rev. A. W. Nicholson, Halifax; *Agents and Lecturers of Grand Division*, Thomas Hutchings and Thomas M. Lewis. Geo. H. Mackinlay, Halifax, *Secretary of Juvenile Organizations*. Quarterly sessions of G. D. are held in different parts of the Province, in January, April and July. The annual session is held each Autumn in Halifax.

INDEPENDENT ORDER OF GOOD TEMPLARS.—The first Lodge in this province was organized at Economy, Colchester, July 4th, 1864. The Grand Lodge was formed February 5th, 1867. In 1876 the disruption occurred on the "colored membership" question, and the N. S. Grand Lodge went with the British and other Grand Bodies and were known as "I. O. G. T. of the World." In November, 1876, a new Grand Lodge was formed of "Loyal" members to the Original Order "American," and two Grand Lodges conducted the Templar movement for eleven years. Union was constantly talked and worked for, and on 7th July, 1887, in New Glasgow, was consummated. The R. W. G. Lodges coalesced the same summer amid great rejoicing wherever Templarism exists.

The chief officers of the United Grand Lodge are *G. W. Chief Templar*, R. D. Duncan, Grand Pre; *Secretary*, Rev. W. G. Lane, Hantsport; *Sup. of Juvenile Templars*, B. D. Rogers, Stellarton. No. of Lodges, 214, with membership of 8600; No. Juvenile Templars, 24, with 1500 members. The next Annual Session will be held in Windsor, commencing July 4th, 1889.

THE BLUE RIBBON CLUBS, under various names, have footing in many towns, and keep up courses of local public meetings which, with the **WOMEN'S TEMPERANCE UNIONS**, are largely instrumental in advancing Temperance sentiment.

THE WOMEN'S CHRISTIAN TEMPERANCE UNION (WHITE RIBBON), has over 500,000 members throughout the world, and is rapidly increasing in every country. Miss Francis Willard of Chicago, is at head of this movement. Miss Sarah Robinson, 14 Hurds Lane, is President of the Halifax Union, and Miss E. B. Hart, 51 Lockman St., Halifax, *Cor. Secy.* **THE NORTH END W. C. T. U.**—*President*, Mrs. A. M. Bell, Hawthorne Place; *Cor. Sec'y*, Mrs. Howard McLean, 23 North Park St.

THE W. C. T. U. of the Maritime Provinces numbers about 3,000 members. *Pres.*, Mrs. W. W. Turnbull, St. John. *Cor. Sec'y.*, Mrs. Judge Steadman, Fredericton. *Rec. Sec'y.*, Miss Sarah Robinson, Halifax. The next Annual Meeting will be held at Amherst, in September, 1890.

THE N. S. BRANCH OF DOMINION TEMPERANCE ALLIANCE consists of delegates from all other societies, combining for united action to secure advanced legislation and to enforce existing laws. The officers are:—*President*, Walter McCurdy, Mid. Musquodoboit. *Vice-Presidents*, Rev. R. F. Burns, D.D., Halifax; Rev. S. F. Huestis, Halifax; J. Parsons, Halifax; P. A. McGregor, New Glasgow; Rev. J. S. Coffin, Sydney; Andrew Kirkpatrick, Shubenacadie; Bowman Corning, Yarmouth. *Secretary*, Firman McClure, Truro. *Treasurer*, D. W. B. Reid, Mid. Musquodoboit. The next Annual Meeting will be held in Halifax (time to be fixed by the Executive).

THE CHURCH TEMPERANCE SOCIETIES and Unions are important factors in this great Moral Reform. Catholics and Protestants of all names are working by means of societies within their own borders, and many of the active supporters of church societies are leaders of the above named organizations.

WRITTEN ALMANACS.

The history of written almanac dates back to the second century of the Christian era. The Greeks at Alexanaria, in the time of Ptolemy (100—150 A. D.) constructed almanacs. Prior to the written almanacs of the Greeks there were calendars or primitive almanacs. One of them was found at Pompeii cut upon a square block of marble, upon each side of which three months were registered in perpendicular columns, each headed by the proper sign of the zodiac. There is in the Savilian Library at Oxford, England, a manuscript copy of an almanac published in the year 1300 A. D., but the first almanac positively known to have been published in England was “Shepherd’s Calendar,” translated from the French and printed by Richard Payson, in 1405.

SYDNEY COAL.

This Coal is mined by the General Mining Association, Limited, of London, G. B., at North Sydney, Cape Breton, and has long been generally known under the name of "SYDNEY COAL," these words being registered as a Trade Mark. Owing to the appropriation of the word "Sydney" in advertising some new mine Cape Breton Coals, the public are cautioned that any Coal advertised with word "Sydney" added to proper name of mine is not "Sydney Coal" and has no connection whatever with it. "SYDNEY" and "VICTORIA" Coals are the only Coals mined on Sydney Harbor.

"SYDNEY COAL" stands away ahead of all Nova Scotian and Cape Breton Coals in its reputation for HOUSE USE. It is also an excellent STEAM COAL.

VICTORIA COAL.

This Coal is mined by the Low Point, Barrasois and Lingan Mining Co., Ltd, at the Victoria Mines, on Sydney Harbor, C. B.
